Implementation Plan - Travel Explore

Goal Description

Create a single-file static website (`index.html`) for "Travel Explore — Panduan Wisata Lombok Utara". The site must be elegant, responsive, and ready for GitHub Pages. It will feature 11 destinations, itineraries, traveler tips, and interactive elements like mode toggle and smooth scrolling.

User Review Required

None specific, standard web features.

Proposed Changes

Root Directory

[NEW] `index.html`

Structure:

`<head>`: Meta tags, Font imports (Poppins, Inter/Roboto), Internal CSS `<style>`.

`<body>`:

- `<nav>`: Logo, Links, Dark Mode Toggle.
- `<header>`: Hero section with full-width background and CTA.
- `<section id="destinations">`: Grid of destination cards.
- `<section id="itinerary">`: Tabs or list for 1/3/5 day itineraries.
- `<section id="tips">`: Traveler tips list/cards.
- `<section id="contact">`: Dummy form and social links.
- `<footer>`: Copyright and links.
- `<button id="backToTop">`: Floating button.

`<script>`: Internal JS for logic.

CSS (Internal):

Variables for colors: `--primary` (#0A3D62), `--accent1` (#38ADA9), `--accent2` (#E58E26), `--text`, `--bg`.

Dark mode class overrides.

Responsive Grid for cards.

Animations: Hover lift, fade-in on scroll.

JavaScript (Internal):

Array of objects for 11 Destinations (Name, Image, Description, Price, Open Hours, Highlights, Rating, Tips).

Function to render destinations dynamically.

Event listeners for Dark Mode toggle.

Scroll listener for Sticky Navbar and Back-to-top visibility.

Smooth scroll implementation.

Verification Plan

Automated Tests

None (Static HTML).

Manual Verification

Open `index.html` in browser via proxy or local check.

Check responsiveness (Mobile/Desktop views).

Toggle Dark Mode.

Verify all 11 destinations are present.

Check navigation links.

Travel Explore Website Develo... + ⌵ ⋮ x

icon

FITUR INTERAKTIF WAJIB:

- Mode gelap/dark mode toggle
- Back-to-top button
- Animasi hover pada card destinasi
- Scroll smooth
- Sticky navbar saat scroll
- Mobile responsive

OUTPUT WAJIB:

Berikan \*1 file HTML lengkap bernama `index.html` berisi:

- HTML5 valid
- CSS internal (`<style>`)
- JavaScript internal (`<script>`)
- responsive & mobile friendly
- semua konten destinasi sesuai daftar di atas
- mode gelap berfungsi
- tombol back-to-top berfungsi
- cocok langsung upload ke GitHub Pages

DI AKHIR JAWABAN HARUS ADA:

1) langkah upload ke GitHub Pages  
2) saran fitur lanjutan (contoh: Google Maps embed, review pengunjung, lightbox galeri foto)

PENTING:

Jangan diringkas. Berikan jawaban full & detail agar saya tinggal copy-paste untuk tugas UAS.

Mulai sekarang, buat output lengkap sesuai instruksi ini.

### Itinerary & Tips Section Revamp Plan

#### Goal

- Itinerary:** Convert to a tabbed interface (Completed).
- Tips:** Transform the "Tips Traveler Cerdas" section into interactive **Flip Cards**. This adds a fun interactive element where users hover (or tap) to reveal the tip details.

#### User Review Required

**NOTE**

For the Tips section, I will implement **Flip Cards**. The card front will show a large icon and Title. The card back will show the detailed tip text. This hides the text initially, making the UI cleaner and encouraging interaction.

#### Proposed Changes

index.html (Tips Section)

- Refactor `.tip-card` structure to have `.tip-card-inner`, `.tip-card-front`, and `.tip-card-back`.

style.css (Tips Section)

- Container styles: `perspective: 1000px` for 3D effect.
- Card Styles:
  - `transform-style: preserve-3d`
  - `transition: transform 0.6s`
  - `backface-visibility: hidden`
- Front Face: Large icon, Title, Gradient background.
- Back Face: Detail text, Solid background color (primary/accent), Rotated 180deg.

Itinerary Section Enhancement

Walkthrough

Updated walkthrough confirming the Tips section fix.

Recent actions

sekarang update code di bagian tips traveler cerdas buat agar terlihat menarik dan intraktif sesuai dengan tampilan webnya

Thought for 9s

Refining Tips Section

I have re-applied the Flip Card CSS. This should align the styling with the existing HTML structure and fulfill the user's request for an attractive and interactive Tips section.
